

PROJECT NAME: Hoytsville Area Drinking Water System Project

RECIPIENT: Weber Basin Water Conservancy District

LOCATION: Hoytsville, UT

PURPOSE: The project location is in the Eastern portion of Summit County, Utah, between the rural towns of Oakley and Coalville. There are approximately 120 individual drinking water wells in this 10 to 15 mile stretch. The wells are mostly drilled in a bedrock formation, which has created difficulty finding enough water, even for one residence. Many of the existing wells have gone dry or have dropped dramatically. The area is in desperate need of a community water system which would be much more reliable and sustaining. It would also supply a much needed fire protection system for the area. This project would include a system wide design, water source development, water storage, and distribution system installation.

AMOUNT: \$1,000,000
